REX25 THE ROUGH TERRAIN CRANE

REX 25

The REX25 rough terrain crane is equipped with a 24 m long, 4-section telescopic boom, with a hydraulic-rope drive.

The compact design and small dimensions of the machine enable easy transport over long distances using a standard lowboy trailer.

LIFTING CAPACITY	[t]	25
MAX. BOOM LENGTH	[m]	24
DRIVE	Hydraulic	4x4
ENGINE	[kW]	95
DIMENSIONS	[mm]	5449 x 2500 x 3270 H

VERSATILE COMPACT CRANE

OFF-ROAD CAPABLE

The innovative hydraulic drive, equipped with both steering axles, allows driving on difficult terrain. The REX25 rough terrain crane can work in pick and carry mode - capable of driving with 5 tons load suspended on a hook. The very tight turning radius of 2850 mm makes it easy to work in tight, confined spaces.

- COMPACT DIMENSIONS
- PICK & CARRY UP TO 5 TONS
- AIR-CONDITIONED OPERATOR'S CABIN
- EXTERNAL CAMERAS, MODERN ENERGY-SAVING LED LIGHTING

The REX25 rough terrain crane is equipped with a microprocessor lifting capacity control system that protects the machine against overload and guarantees stability.

REX MULTIPURPOSE

The REX25 rough terrain crane can be equipped with a self-leveling personnel basket. It is possible to equip the boom with adapters enabling the installation of additional equipment.

MANY FACES OF REX

The REX25 is characterized by a compact design, thought out to the smallest detail, made of high-quality steel. It is equipped with the most modern control and drive systems.

Crane built on a truck chassis under development. Capacity 35t, max. boom length 35m.

The concept works assume the construction of the crane on a tracked chassis. Like the REX25, the crane's dimensions will enable easy transport on lowboy trailers.

35T

The further development of the REX cranes is the extension of the series of rough terrain cranes with a higher lifting capacity - 35t. Consistently higher load capacities for all types of cranes.
